If you want create a mix and match set of patches, you can! But first, understand that the patch numbers on the unit do not correspond with patch numbers in the patch filename on your computer. This is important to know when creating a mix and match set. We've included a reference chart on the following page.

So to make your own mix and match set, create a blank folder on your computer called BACKUP, then copy any patches (eg JU06_PATCH33.PRM etc) that you want into that folder (those patches are found in the BACKUP folder that you copied to your PC in the "Backup your patches" procedure on page 1 of this document). That BACKUP folder can then be loaded into your JU-06/JP-08 and backed up from your JU-06/JP-08 as instructed on page one of this manual.

In addition, you can renumber any of those patch filenames so they load into the JU-06/JP-08 patch slot you prefer. Just keep in mind the numbering system.

So for example, if you wanted to make Patch 1 in Bank 5 load into Patch 5 in Bank 8 instead, you rename the patch file on your pc in your BACKUP folder, like this:

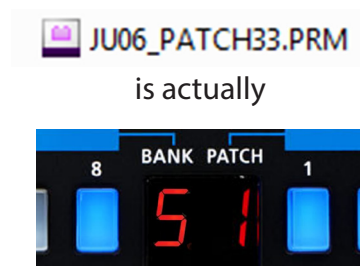

rename filename

JU06_PATCH33.PRM (Patch 1 of Bank 5 - will be displayed at "15" on the synth)

to

JU06_PATCH62.PRM (Patch 6 of Bank 8 - will be displayed as "86" on the synth)

The following page contains a handy chart for reference when creating your mix and match set.
